Teledyne RESON

Broadband Reference Hydrophones, Transducers, and Accessories
Hydrophone and Transducer Product Line

Teledyne RESON extensive line of Hydrophones and Transducers are divided into the following product groups:

**1000 series**
Hemispherical, broadband, low to mid frequency. Typically used for transponders, pingers, acoustic telemetry, tracking, and positioning.

**2000 series**
Directional low/mid/high frequencies, broadband. Typically used for echosounders, side scan systems, and backscatter measurements.

**3000 series**
Directional high frequency, 500 kHz to 2 MHz. Typically used for sound velocity probes, custom sonar design, and short range distance measurements.

**4000 series**
Typically used for precision reference measurement hydrophones, reference projectors, passive arrays, positioning systems, and tracking systems.
Flexibility, Responsiveness & Service

Our Sales, Service, and R&D departments are dedicated to providing solutions for customer needs. In addition to maintaining a product line of standard transducers and hydrophones, our experienced team of Acoustic Engineers also design and manufacture customer-specific sensors. We are also flexible to discuss modification of our Commercial of the Shelf (COTS) products to better fit specific system integration requirements for higher quantities. Teledyne RESON is dedicated to your solutions.

Quality

The corporate headquarters in Denmark, Teledyne RESON, is quality certified in accordance with ISO 9001:2008, which ensures that all Teledyne RESON products are manufactured according to the strictest quality requirements for reliable long term, continuous operation. The complete manufacturing process is monitored, from development through production and shipping. Our Production and Calibration facility includes two large tanks where we can perform calibration measurements of our products, and a high-pressure test tank with pressure range up to 700 bar.

AT A GLANCE

- Broadband (0.1Hz to 1MHz)
- Small size
- Linear Receive Response
- Omnidirectional
- Individually calibrated
- Low self noise below SSθ
- Balanced Differential and Single-ended output
- NBR for long term deployment
- Resistance to hydrocarbons
- Modular designs

TELEDYNE RESON PROVIDES

- Quality
- Performance
- Precision
- Uniformity
- Reliability
- Durability
- Responsiveness
- Flexibility
- Options
Teledyne RESON has over 30 years proven reliability in underwater acoustics. Over the years we have worked with internationally recognized laboratories and industries on the development of acoustic standard references and advanced sensor designs. The result of this work is an expansive, comprehensive line of precision reference hydrophones, projectors, and transducers covering frequencies from 0.1Hz to the MHz band.

Every hydrophone and transducer leaving production is individually calibrated. Teledyne RESON provides calibrations consistent with international standards established at the National Physical Laboratory, UK.

Teledyne RESON reference hydrophones are designed for precision underwater acoustic measurements, signal detection, and/or calibrated reference acoustic projection. Our hydrophones are internationally trusted for quality acoustic measuring in scientific research, navy, and environmental monitoring.

Teledyne RESON is also an OEM supplier of hydrophones and transducers for many industrial and commercial products.

Accessories

**EC6061 Voltage Preamplifier**
- Hi-Pass filters 0.1Hz-50kHz
- Output gain 0-32dB
- 1MHz Bandwidth
- 9-18VDC
- 100M-Ω input impedance / 10 Ω output impedance
- Splash proof and portable

**EC6081 Voltage Preamplifier with Band Pass Filters**
- Hi-Pass filters 1Hz-250kHz
- Lo-Pass filters 1kHz-1MHz
- Output gain 0-50dB
- 1MHz Bandwidth
- 10-30VDC
- 100M-Ω input impedance /10 Ω output impedance
- Splash proof and portable

**EC6067 Condition Charge Amplifier**
- Adjustable input capacitance for long cable runs
- Input resistance settings to set Hi-Pass filters
- Output gain 0-32dB
- 1MHz Bandwidth
- 12-24VDC
- 3.3Ω to 1GΩ input impedance / 20 Ω output impedance
- Splash proof and portable

**EC6070 Audio Amplifier**
- Audio amplifier for monitoring underwater acoustic signals
- Built-in envelope sonar detector for dolphin echo clicks
- Bandwidth up to 700kHz
- Total signal amplification up to 90dB
- Hi-Pass filtering
- Built-in landspeaker and headphone amplifiers
- Input/Output via BNC and MMI jacks

**EC6073 Input Module**
- Hassel-Free Plug-and-Play system
- Provides input for 7-pin female Jupiter
- Provides input for LEMO (4 pin)
- Live level signal output via BNC
- Input for VDC to power the preamplifier
- Input for calibration tone
- Power cables included
- Splash proof and portable

**Optional Battery Packs for Teledyne RESON Preamplifiers**

**EC6068**
12 VDC rechargeable power supply, to be used with EC6072 (you need both)

**EC6072**
Battery charger for EC6068, direct DC power supply to VP1000, VP2000, CCA-1000 or EC6073 input module

**EC6069**
18VDC dry-cell power supply, 2x9V batteries

*For use of differential output mode (where available) do not use EC6073 based setup as shown above. Use TL8140 pigtail cable and terminate as required.
Example set up

Calibrations are done with respect to a reference hydrophone. The reference hydrophone is calibrated by the reciprocity method and this is undertaken by the National Physical Laboratory (NPL) in the United Kingdom. For more details on calibrations and related uncertainties please see [www.teledyne-reson.com/calibration](http://www.teledyne-reson.com/calibration).

Teledyne RESON calibrations use pulse-gated measurement techniques are used to avoid reflections in the tank. Voltage, current, and impedance are all measured within the same gated pulse. The pulse width is limited by its wavelength and the size of the tank. We also perform a pistonphone calibration test at 250Hz. Every Hydrophone and Transducer that leaves our facility is quality checked and individually calibrated. Each unit has its own serial number and ships with its own receive, impedance and transmit (when applicable) calibration plots.
